- > The Modem can be placed on a shelf or desktop.

2.4 Connecting the Modem

Before installing the device, please make sure your broadband service provided by your ISP is available. If there is any problem, please contact your ISP. You need to connect the device to the phone jack, the power outlet, and your computer or network. Before cable connection, cut off the power supply and keep your hands dry. You can follow the steps below to install it.

Step 1: Connect the ADSL Line.

Method one: Plug one end of the twisted-pair ADSL cable into the ADSL LINE port on the rear panel of TD-8616, and insert the other end into the wall socket.

Method two: You can use a separate splitter. External splitter can divide the data and voice, and then you can access the Internet and make calls at the same time. The external splitter has three ports:

- LINE: Connect to the wall jack
- PHONE: Connect to the phone sets
- MODEM: Connect to the ADSL LINE port of TD-8616

Plug one end of the twisted-pair ADSL cable into the ADSL LINE port on the rear panel of TD-8616. Connect the other end to the MODEM port of the external splitter.

- Step 2: Connect the Ethernet cable. Attach one end of a network cable to your computer's Ethernet port or a regular hub/switch port, and the other end to the LAN port on the TD-8616.
- **Step 3:** Attach the power adapter. Connect the AC power adapter to the POWER connector on the rear of the device and plug in the adapter to a wall outlet or power extension.
- **Step 4:** Turn on the TD-8616 and power on the computers and LAN devices.
